

U.S. Bureau of Reclamation
Emergency Condition Notification Form

Date: Final Posting August 24, 2011

Time: 1:00 PM (MDT)

Facility Affected: Tiber Dam

River(s) Affected: Marias River

1. Condition Description

In coordination with the Corp of Engineers, the Bureau of Reclamation continues to evacuate water that has been stored in the flood pool during this year's spring runoff season.

The reservoir remains in the flood pool and is anticipated to remain there for several weeks, however, the water elevation has receded below the previous historic high reservoir level and continues to be lowered at approximately 0.20 feet per day. Accordingly, Reclamation has ceased daily postings at <http://www.usbr.gov/gp/mtao> and encourages interested agencies and officials to visit http://www.usbr.gov/gp/lakes_reservoirs/montana_lakes.htm for current conditions and operations at Tiber Dam.

2. Potential River Levels and Times of Arrival

Marias River Location
Loma

Approximate Travel Time
12-15 hours

3. Actions Taken by Reclamation

Reclamation continues to monitor river levels both upstream and downstream of Lake Elwell, as well at conditions at Tiber Dam and will issue further notifications as conditions warrant.

4. Actions Expected of Downstream Agencies

Downstream agencies should take these reservoir levels and flows into account combined with existing downstream tributary flows entering the Marias River when determining potential actions.
